

Bunker Hill Community College

Final Statistics Exam 2019-05-02

Exam ID 005

Name: _____

This take-home exam is due **Wednesday, May 8**, at the beginning of class.

You may use any notes, textbook, or online tools; however, you may not request help from any other human.

You will show your work on the pages with questions. When you are sure of your answers, you will **put those answers in the boxes** on the first few pages.

Unless you have an objection to doing so, please **copy the honor-code text below and sign**.

I understand that outside help is NOT allowed on this exam. On my honor, the work herein is my own.

Signature: _____

1.
 - (a)
 - (b)
 - (c)
 - (d)
 - (e)
 - (f)
2.
3.
4.

 - (g)
7.
 - (a)
 - (b)

8. (a)

(b)

(c)

(d)

(e)

(f)

(g)

1. In a deck of strange cards, there are 725 cards. Each card has an image and a color. The amounts are shown in the table below.

	pink	teal	white
dog	35	38	60
horn	44	61	32
pig	39	90	20
tree	51	83	41
wheel	21	46	64

- (a) What is the probability a random card is a wheel given it is pink?
- (b) What is the probability a random card is both a pig and pink?
- (c) What is the probability a random card is pink?
- (d) What is the probability a random card is teal given it is a pig?
- (e) What is the probability a random card is either a dog or white (or both)?
- (f) What is the probability a random card is a dog?

2. In a deck of strange cards, each card has an image and a color. The chance of drawing a kite is 17.4%. If a kite is drawn, there is a 84.6% chance that it is gray. If a card that is not a kite is drawn, there is a 56% chance that it is gray.

Now, someone draws a random card and reveals it is gray. What is the chance the card is a kite?

3. In a very large pile of toothpicks, the mean length is 64.98 millimeters and the standard deviation is 3.75 millimeters. If you randomly sample 125 toothpicks, what is the chance the sample mean is between 64.09 and 65.2 millimeters?

4. In a game, there is a 25% chance to win a round. You will play 41 rounds.
- (a) What is the probability of winning exactly 10 rounds?
 - (b) What is the probability of winning at least 5 but at most 10 rounds?

5. As an ornithologist, you wish to determine the average body mass of *Setophaga ruticilla*. You randomly sample 19 adults of *Setophaga ruticilla*, resulting in a sample mean of 9.25 grams and a sample standard deviation of 1.34 grams. Determine a 95% confidence interval of the true population mean.

6. A treatment group of size 10 has a mean of 1020 and standard deviation of 36.8. A control group of size 26 has a mean of 998 and standard deviation of 34.6. If you decided to use a significance level of 0.1, is there sufficient evidence to conclude the treatment causes an effect?

By using the Welch-Satterthwaite equation, I've calculated the degrees of freedom should be 15.

- (a) State the null hypothesis.
- (b) State the alternative hypothesis.
- (c) Evaluate the critical value. (The critical value is either z^* or t^* . Determine its value.)
- (d) Determine the standard error of the relevant sampling distribution.
- (e) Evaluate the absolute value of the test statistic. (The test statistic is either z_{obs} or t_{obs} . Determine its absolute value.)
- (f) If possible, evaluate the p -value. Otherwise, describe an interval containing the p -value.
- (g) Do we reject or retain the null?

7. From a very large population, a random sample of 55000 individuals was taken. In that sample, 51.2% were happy. Determine a 95% confidence interval of the population proportion.
- (a) Find the lower bound of the confidence interval.
 - (b) Find the upper bound of the confidence interval.

8. An experiment is run with a treatment group of size 266 and a control group of size 224. The results are summarized in the table below.

	treatment	control
sorry	81	95
not sorry	185	129

Using a significance level of 0.01, determine whether the treatment causes an effect on the proportion of cases that are sorry.

- (a) State the null hypothesis.
- (b) State the alternative hypothesis.
- (c) Evaluate the critical value. (The critical value is either z^* or t^* . Determine its value.)
- (d) Determine the standard error of the relevant sampling distribution.
- (e) Evaluate the absolute value of the test statistic. (The test statistic is either z_{obs} or t_{obs} . Determine its absolute value.)
- (f) If possible, evaluate the p -value. Otherwise, describe an interval containing the p -value.
- (g) Do we reject or retain the null?
