

Bunker Hill Community College

Final Statistics Exam 2019-05-02

Exam ID 015

Name: _____

This take-home exam is due **Wednesday, May 8**, at the beginning of class.

You may use any notes, textbook, or online tools; however, you may not request help from any other human.

You will show your work on the pages with questions. When you are sure of your answers, you will **put those answers in the boxes** on the first few pages.

Unless you have an objection to doing so, please **copy the honor-code text below and sign**.

I understand that outside help is NOT allowed on this exam. On my honor, the work herein is my own.

Signature: _____

1. (a)
- (b)
- (c)
- (d)
- (e)
- (f)
2.
3.
4. (a)
- (b)
5.
6. (a)
- (b)
- (c)
- (d)
- (e)
- (f)
- (g)
7. (a)
- (b)

8. (a)
- (b)
- (c)
- (d)
- (e)
- (f)
- (g)

1. In a deck of strange cards, there are 1152 cards. Each card has an image and a color. The amounts are shown in the table below.

	blue	green	orange	pink	white
dog	20	19	17	56	64
shovel	80	65	99	89	97
tree	29	63	90	37	48
wheel	57	47	10	79	86

- (a) What is the probability a random card is a tree?
- (b) What is the probability a random card is a dog given it is blue?
- (c) What is the probability a random card is pink?
- (d) What is the probability a random card is orange given it is a dog?
- (e) What is the probability a random card is either a wheel or blue (or both)?
- (f) What is the probability a random card is both a wheel and green?

2. In a deck of strange cards, each card has an image and a color. The chance of drawing a wheel is 11.7%. If a wheel is drawn, there is a 44.4% chance that it is violet. If a card that is not a wheel is drawn, there is a 79.7% chance that it is violet.

Now, someone draws a random card and reveals it is not violet. What is the chance the card is a wheel?

3. In a very large pile of toothpicks, the mean length is 65.86 millimeters and the standard deviation is 3.54 millimeters. If you randomly sample 120 toothpicks, what is the chance the sample mean is between 65.66 and 66.57 millimeters?

4. In a game, there is a 31% chance to win a round. You will play 122 rounds.
- (a) What is the probability of winning exactly 42 rounds?
 - (b) What is the probability of winning at least 26 but at most 49 rounds?

5. As an ornithologist, you wish to determine the average body mass of *Seiurus noveboracensis*. You randomly sample 27 adults of *Seiurus noveboracensis*, resulting in a sample mean of 21.2 grams and a sample standard deviation of 3.71 grams. Determine a 98% confidence interval of the true population mean.

6. A treatment group of size 28 has a mean of 1010 and standard deviation of 88. A control group of size 40 has a mean of 1050 and standard deviation of 69.5. If you decided to use a significance level of 0.04, is there sufficient evidence to conclude the treatment causes an effect?

By using the Welch-Satterthwaite equation, I've calculated the degrees of freedom should be 49.

- (a) State the null hypothesis.
- (b) State the alternative hypothesis.
- (c) Evaluate the critical value. (The critical value is either z^* or t^* . Determine its value.)
- (d) Determine the standard error of the relevant sampling distribution.
- (e) Evaluate the absolute value of the test statistic. (The test statistic is either z_{obs} or t_{obs} . Determine its absolute value.)
- (f) If possible, evaluate the p -value. Otherwise, describe an interval containing the p -value.
- (g) Do we reject or retain the null?

7. From a very large population, a random sample of 1700 individuals was taken. In that sample, 91.8% were broken. Determine a 80% confidence interval of the population proportion.
- (a) Find the lower bound of the confidence interval.
 - (b) Find the upper bound of the confidence interval.

8. An experiment is run with a treatment group of size 223 and a control group of size 234. The results are summarized in the table below.

	treatment	control
sorry	100	133
not sorry	123	101

Using a significance level of 0.02, determine whether the treatment causes an effect on the proportion of cases that are sorry.

- (a) State the null hypothesis.
- (b) State the alternative hypothesis.
- (c) Evaluate the critical value. (The critical value is either z^* or t^* . Determine its value.)
- (d) Determine the standard error of the relevant sampling distribution.
- (e) Evaluate the absolute value of the test statistic. (The test statistic is either z_{obs} or t_{obs} . Determine its absolute value.)
- (f) If possible, evaluate the p -value. Otherwise, describe an interval containing the p -value.
- (g) Do we reject or retain the null?
