

Bunker Hill Community College

Final Statistics Exam 2019-05-02

Exam ID 024

Name: _____

This take-home exam is due **Wednesday, May 8**, at the beginning of class.

You may use any notes, textbook, or online tools; however, you may not request help from any other human.

You will show your work on the pages with questions. When you are sure of your answers, you will **put those answers in the boxes** on the first few pages.

Unless you have an objection to doing so, please **copy the honor-code text below and sign**.

I understand that outside help is NOT allowed on this exam. On my honor, the work herein is my own.

Signature: _____

1.
 - (a)
 - (b)
 - (c)
 - (d)
 - (e)
 - (f)
2.
3.
4.
 - (a)
 - (b)
5.
6.
 - (a)
 - (b)
 - (c)
 - (d)
 - (e)
 - (f)
 - (g)
7.
 - (a)
 - (b)

8. (a)
- (b)
- (c)
- (d)
- (e)
- (f)
- (g)

1. In a deck of strange cards, there are 502 cards. Each card has an image and a color. The amounts are shown in the table below.

	black	indigo	white
bike	85	43	60
dog	33	68	52
flower	27	50	17
tree	11	34	22

- (a) What is the probability a random card is indigo?
- (b) What is the probability a random card is both a tree and white?
- (c) What is the probability a random card is a tree?
- (d) What is the probability a random card is indigo given it is a bike?
- (e) What is the probability a random card is either a flower or black (or both)?
- (f) What is the probability a random card is a flower given it is white?

2. In a deck of strange cards, each card has an image and a color. The chance of drawing a horn is 47.8%. If a horn is drawn, there is a 85.6% chance that it is gray. If a card that is not a horn is drawn, there is a 16.8% chance that it is gray.

Now, someone draws a random card and reveals it is gray. What is the chance the card is a horn?

3. In a very large pile of toothpicks, the mean length is 65.53 millimeters and the standard deviation is 3.99 millimeters. If you randomly sample 125 toothpicks, what is the chance the sample mean is between 64.9 and 66.04 millimeters?

4. In a game, there is a 62% chance to win a round. You will play 167 rounds.
- (a) What is the probability of winning exactly 102 rounds?
 - (b) What is the probability of winning at least 92 but at most 102 rounds?

5. As an ornithologist, you wish to determine the average body mass of *Dendroica palmarum*. You randomly sample 34 adults of *Dendroica palmarum*, resulting in a sample mean of 10.47 grams and a sample standard deviation of 1.25 grams. Determine a 98% confidence interval of the true population mean.

6. A treatment group of size 18 has a mean of 1.01 and standard deviation of 0.0894. A control group of size 19 has a mean of 1.06 and standard deviation of 0.0709. If you decided to use a significance level of 0.04, is there sufficient evidence to conclude the treatment causes an effect?

By using the Welch-Satterthwaite equation, I've calculated the degrees of freedom should be 32.

- (a) State the null hypothesis.
- (b) State the alternative hypothesis.
- (c) Evaluate the critical value. (The critical value is either z^* or t^* . Determine its value.)
- (d) Determine the standard error of the relevant sampling distribution.
- (e) Evaluate the absolute value of the test statistic. (The test statistic is either z_{obs} or t_{obs} . Determine its absolute value.)
- (f) If possible, evaluate the p -value. Otherwise, describe an interval containing the p -value.
- (g) Do we reject or retain the null?

7. From a very large population, a random sample of 47000 individuals was taken. In that sample, 95.2% were asleep. Determine a 90% confidence interval of the population proportion.
- (a) Find the lower bound of the confidence interval.
 - (b) Find the upper bound of the confidence interval.

8. An experiment is run with a treatment group of size 68 and a control group of size 54. The results are summarized in the table below.

	treatment	control
abysmal	50	50
not abysmal	18	4

Using a significance level of 0.005, determine whether the treatment causes an effect on the proportion of cases that are abysmal.

- (a) State the null hypothesis.
- (b) State the alternative hypothesis.
- (c) Evaluate the critical value. (The critical value is either z^* or t^* . Determine its value.)
- (d) Determine the standard error of the relevant sampling distribution.
- (e) Evaluate the absolute value of the test statistic. (The test statistic is either z_{obs} or t_{obs} . Determine its absolute value.)
- (f) If possible, evaluate the p -value. Otherwise, describe an interval containing the p -value.
- (g) Do we reject or retain the null?
