Bunker Hill Community College

Final Statistics Exam 2019-05-02

Exam ID 011

| Name: |
|---|
| |
| is take-home exam is due Wednesday, May 8 , at the beginning of class. |
| u may use any notes, textbook, or online tools; however, you may not request help from ner human. |
| u will show your work on the pages with questions. When you are sure of your answers, I put those answers in the boxes on the first few pages. |
| lless you have an objection to doing so, please copy the honor-code text below and s |
| understand that outside help is NOT allowed on this exam. On my honor, the work herei my own. |
| |
| |

1. In a deck of strange cards, there are 895 cards. Each card has an image and a color. The amounts are shown in the table below.

| | green | indigo | pink | red | yellow |
|--------|-------|--------|------|-----|--------|
| dog | 16 | 26 | 86 | 65 | 14 |
| pig | 34 | 18 | 36 | 68 | 90 |
| shovel | 31 | 19 | 45 | 73 | 41 |
| tree | 84 | 40 | 13 | 20 | 76 |

- (a) What is the probability a random card is a tree?
- (b) What is the probability a random card is either a shovel or indigo (or both)?
- (c) What is the probability a random card is both a shovel and red?
- (d) What is the probability a random card is yellow given it is a dog?
- (e) What is the probability a random card is a pig given it is pink?
- (f) What is the probability a random card is pink?

2. In a deck of strange cards, each card has an image and a color. The chance of drawing a wheel is 25.9%. If a wheel is drawn, there is a 80.4% chance that it is green. If a card that is not a wheel is drawn, there is a 12.7% chance that it is green.

Now, someone draws a random card and reveals it is green. What is the chance the card is not a wheel?

3. In a very large pile of toothpicks, the mean length is 68.4 millimeters and the standard deviation is 1.99 millimeters. If you randomly sample 225 toothpicks, what is the chance the sample mean is between 68.15 and 68.51 millimeters?

- 4. In a game, there is a 58% chance to win a round. You will play 48 rounds.
 - (a) What is the probability of winning exactly 25 rounds?
 - (b) What is the probability of winning at least 23 but at most 34 rounds?

5. As an ornithologist, you wish to determine the average body mass of *Vireo griseus*. You randomly sample 33 adults of *Vireo griseus*, resulting in a sample mean of 10.04 grams and a sample standard deviation of 0.653 grams. Determine a 80% confidence interval of the true population mean.

6. A treatment group of size 33 has a mean of 109 and standard deviation of 14. A control group of size 29 has a mean of 101 and standard deviation of 11.1. If you decided to use a signficance level of 0.01, is there sufficient evidence to conclude the treatment causes an effect?

By using the Welch-Satterthwaite equation, I've calculated the degrees of freedom should be 59.

- (a) State the null hypothesis.
- (b) State the alternative hypothesis.
- (c) Evaluate the critical value. (The critical value is either z^* or t^* . Determine its value.)
- (d) Determine the standard error of the relevant sampling distribution.
- (e) Evaluate the absolute value of the test statistic. (The test statistic is either z_{obs} or t_{obs} . Determine its absolute value.)
- (f) If possible, evaluate the p-value. Otherwise, describe an interval containing the p-value.
- (g) Do we reject or retain the null?

- 7. From a very large population, a random sample of 5400 individuals was taken. In that sample, 87.8% were tasty. Determine a 80% confidence interval of the population proportion.
 - (a) Find the lower bound of the confidence interval.
 - (b) Find the upper bound of the condifence interval.

8. An experiment is run with a treatment group of size 165 and a control group of size 173. The results are summarized in the table below.

| | treatment | control |
|------------|-----------|---------|
| folksy | 110 | 94 |
| not folksy | 55 | 79 |

Using a significance level of 0.04, determine whether the treatment causes an effect on the proportion of cases that are folksy.

- (a) State the null hypothesis.
- (b) State the alternative hypothesis.
- (c) Evaluate the critical value. (The critical value is either z^* or t^* . Determine its value.)
- (d) Determine the standard error of the relevant sampling distribution.
- (e) Evaluate the absolute value of the test statistic. (The test statistic is either z_{obs} or t_{obs} . Determine its absolute value.)
- (f) If possible, evaluate the p-value. Otherwise, describe an interval containing the p-value.
- (g) Do we reject or retain the null?
