**ID: 016** 

1. An experiment has  $n_1 = 8$  plants in the treatment group and  $n_2 = 6$  plants in the control group. After some time, the plants' heights (in cm) are measured, resulting in the following data:

|           | value1 | value2 | value3 | value4 | value5 | value6 | value7 | value8 |
|-----------|--------|--------|--------|--------|--------|--------|--------|--------|
| sample 1: | 137    | 134    | 157    | 141    | 128    | 114    | 166    | 134    |
| sample 2: | 92     | 102    | 96     | 97     | 89     | 101    |        |        |

- (a) Determine degrees of freedom.
- (b) Determine  $t^*$  for a 98% confidence interval.
- (c) Determine SE.
- (d) Determine a lower bound of the 98% confidence interval of  $\mu_2 \mu_1$ .
- (e) Determine an upper bound of the 98% confidence interval of  $\mu_2 \mu_1$ .
- (f) Determine  $|t_{\rm obs}|$  under the null hypothesis  $\mu_2 \mu_1 = 0$ .
- (g) Determine a lower bound of the two-tail *p*-value.
- (h) Determine an upper bound of two-tail *p*-value.
- (i) Do you reject the null hypothesis with a two-tail test using a significance level  $\alpha$  = 0.02? (yes or no)
